

To craft a megalodon

Diego Conti, Federico A. Rossi and Romeo Segnan Dalmaso

January 11, 2024

This ancillary file contains the output of Algorithm 1 in dimensions 6 through 9. We restrict to surjective root matrix and the situation where (N5) defines $|\mathcal{A}|$ independent equations, i.e. A is uniquely determined from the data. The resulting solutions of

$$\text{Ric} = -\text{tr}((D^s)^2)\text{Id} - \frac{1}{2}[D, D^*] + (\text{tr } D)D^s, \quad \text{tr}(\text{ad } v \circ D^*) = 0, \quad v \in \mathfrak{g}, \quad (1)$$

are given in tables, one for each dimension. Each row of the table contains a Lie algebra \mathfrak{g} , a derivation D , and then the list of compatible metrics. The derivation D is expressed as a sum $v + \sum a_{ij}e^i \otimes e_j$, where v is a vector representing the diagonal derivation v^D . Since the nice basis is orthonormal, the metric is specified by giving the indices of the timelike vectors in the basis. Thus, for instance, 12 represents the metric $\text{diag}(-1, -1, 1, \dots, 1)$. The column \mathbf{S} in each table indicates the set of admissible signatures represented in this way.

A Dimension 6

Table A: Solutions of (1) obtained with Algorithm 1 with $n = 6$
